

We will rename the macro file “HowTo_CreateClipboardMacro.4tw” to “HowTo_CombineMultipleMacros.4tw”, open it in Macro Toolworks using “File/Open” menu command, and start extending it.

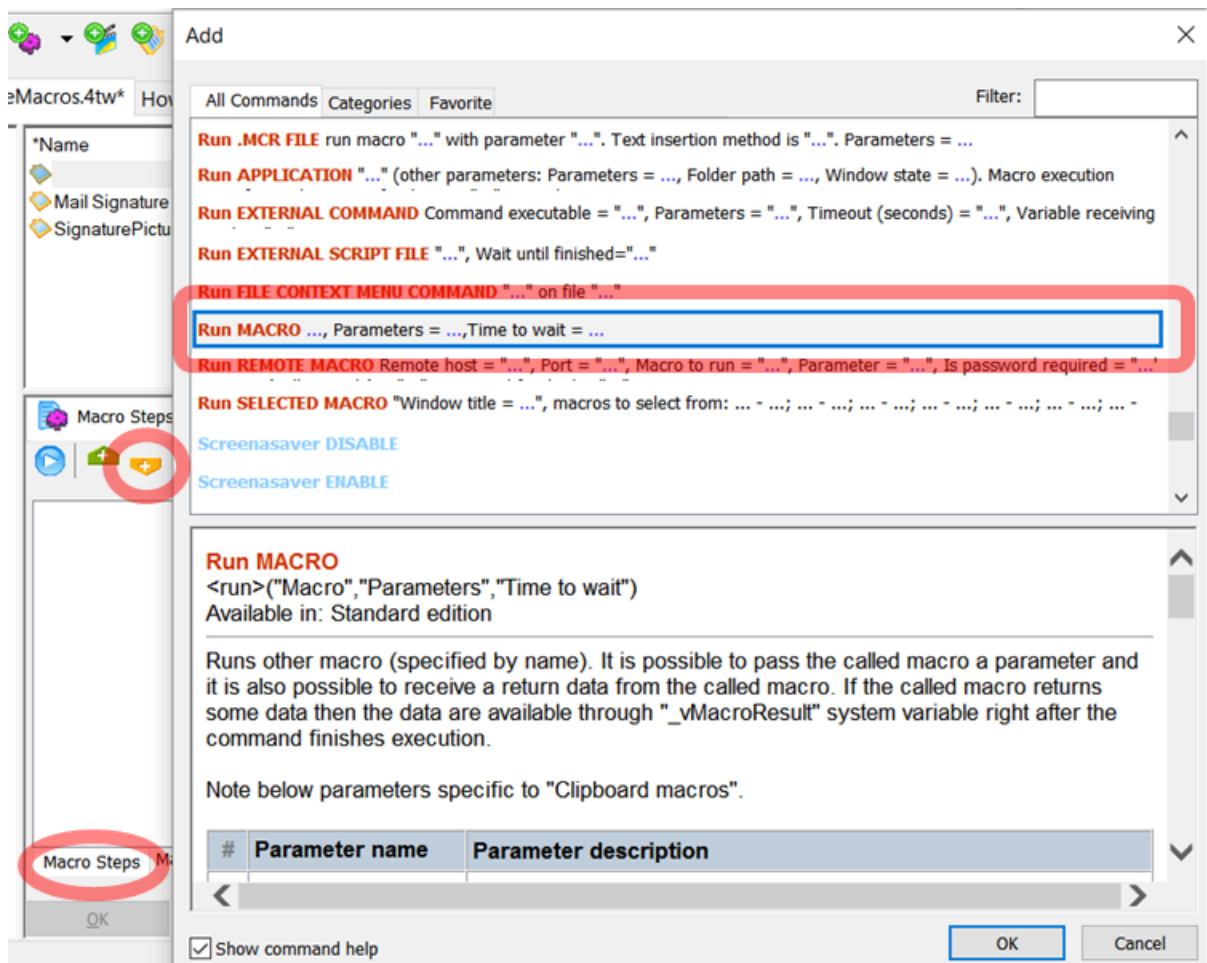

Note: You may need to read “How to Create Text Insertion Macro” and “How to Create Clipboard Macro” tutorials before moving to this one.

Steps:

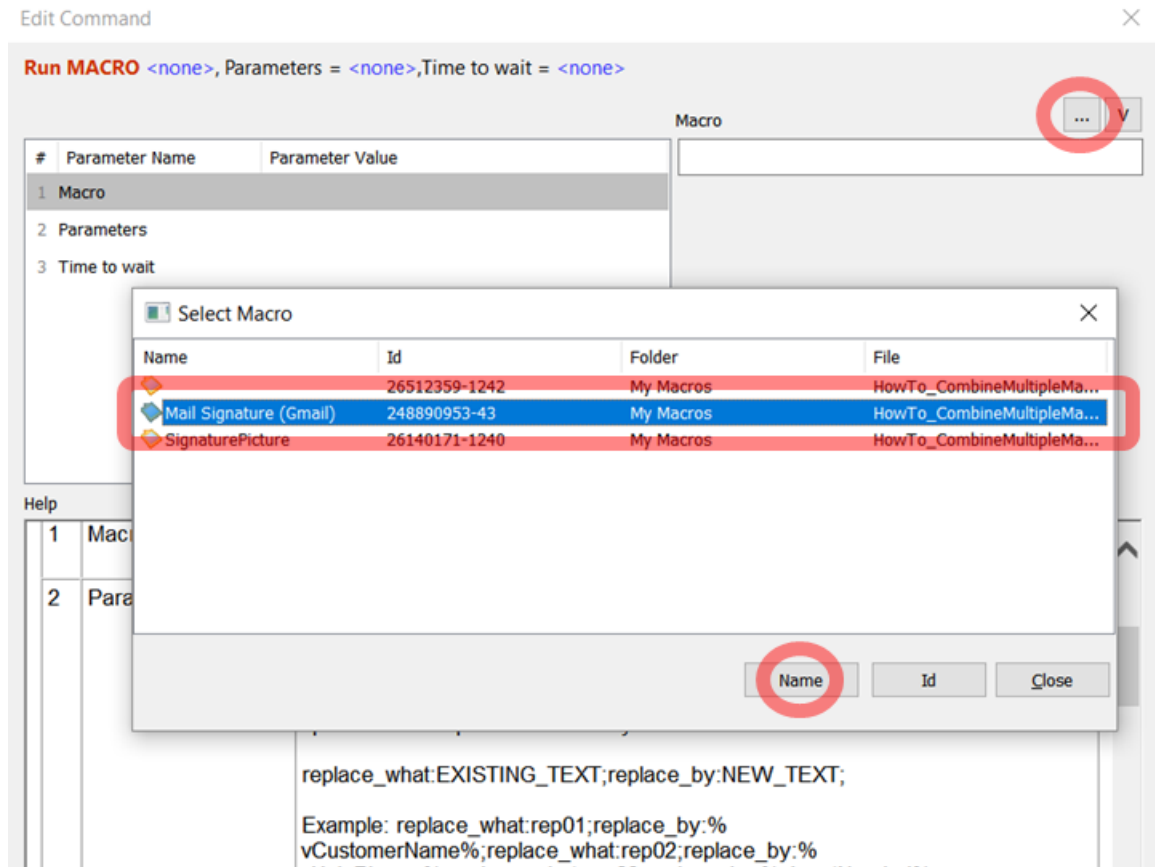

1. Let’s create a new Clipboard Macro with the picture. Copy the picture to the clipboard and then use “Add Clipboard Macro” button.
2. Let’s name the new Clipboard Macro “SignaturePicture”.

3. Now we create a new macro by clicking “Add Macro” button. In the “Macro Steps” tab, click on Add Command  icon to add “Run MACRO” command:

4. We configure the "Run MACRO" command to run the "Mail Signature (Gmail)" macro and click OK:

5. The same way we add one more “Run MACRO” command that we configure to run “SignaturePicture”. Then we name the macro “MailPictureSignature” and assign it “.mps” text shortcut. So what we get is a macro that calls two other macros in order to generate the required result – mail signature (the first Run MACRO command) and the picture (the second Run MACRO command):
